

Advising Acknowledgement Form Performance-Based Education

I, _____, TSTC Student ID _____
(student printed name)
acknowledge that I have met with an Enrollment Coach (EC) regarding the transition of the
_____ program into a Performance Based Education (PBE) method of
delivery.

As a current TSTC student, I understand that if I change from the traditional program format to the performance based model that I cannot change back to the traditional program. If I elect to remain in the traditional program format and have a break in enrollment (one or more terms), I may need to transition to the performance based model.

Please select one option:

- ☐ I want to join the new format of my program and understand the new grading and scheduling requirements for this program.
- ☐ I do not want to join the new format of my program at this time and will remain in the teach-out of my program. I understand if I have a break in enrollment I may need to transition to the new performance based model based on current policy and procedures.

By signing below, I acknowledge that I was provided information regarding PBE and agree to the terms of my selection above:

(Student Signature)

(Date)

I have advised student of program expectations and outcomes.

Benefits of Performance-Based Education

Flexibility/Accessibility

PBE curriculum is student-centered and meets you where you are, allowing more flexibility in the time it may take to cover specific course content within the semester. PBE will place the scheduled lecture content online and will provide additional options for scheduling your required lab time, including some evenings and in certain programs, online courses will also be available.

Acceleration

PBE programs can be less time consuming than traditional programs because you can accelerate through a class as your schedule allows for that flexibility.

Personalization

You usually have choices for how to be a specialist in content, and many PBE programs offer the chance for you to increase credit for preceding education.

Curriculum Clarity

Competencies are openly related to precise skills that you're required to exhibit which makes the earned qualifications more helpful to employers who can evaluate your proficiency more accurately.

Student-Centric

PBE programs evolve around you in all areas; from scheduling to curriculum development, you remain the focus. You are able to spend your time focusing on the areas where you feel the weakest.

Increased Rigor & Quality

Your goal is to master each competency/learning objective prior to moving on in a course, which means you are a higher quality of graduate entering the workforce.

Increased Focus on Hands-On Learning

You and your instructors will be able to spend more individually-focused time in the labs doing hands-on learning and teaching after you review lesson materials. Classroom learning will happen more online while understanding and application will happen more in the labs.

Performance-Based Education requires a lot of self-discipline and initiative. Keep in mind that your skills mastery will require attendance of scheduled time in the labs with additional required content placed online. Your instructors will be able to clarify any questions you may have for further understanding of course content but rarely will you see any formal lectures.

YOUR RHYTHM.

YOUR BEAT.

LEARN AT YOUR PACE IN THE PERFORMANCE OF YOUR CAREER.
