

Top Educators' Secrets for Creating Star Students

Webinar Handout for February 7, 2014

Description

Top teachers have many things in common. They inspire students not just to learn; but also to dream, and those students become motivated, engaged, and disciplined as a result of that influence. But these educators have something more, something that often goes unspoken: the moment that took them from inspiring single star students to transforming entire classrooms. We asked several top educators about the turning point that changed their classrooms and it turns out there are common themes.
