On our 2021 Ford Mustang Mach E you will perform a complete AV system calibration using our LAUNCH Calibration System.

Or, you may perform the calibration on another vehicle, after discussing with your instructor.

- Are there any DTCs present that may interfere with a successful AV system calibration?

- Which AV system(s) is/are the vehicle equipped with?

- What is the first step in the calibration procedure?

- Which target or targets are you using?

- At which point in the calibration procedure did you cycle the key and why?

- How long did it take you and your partner to perform the complete calibration?
- Why?

- What was the result?

Submit the work sheet to the class drop box along with any other supporting documentation you may have.

Instructor approval:
